Among the adult population affected by obesity, poor self-image and self-esteem are very common. One study (Strauss, 1999) found that in children affected by obesity, their self-esteem does not differ significantly from a child not affected by obesity up to ages nine or 10. In fact, according to the Center on an Aging Society, “children affected by obesity seem as socially well-adjusted and are just as likely to be happy as children not affected.” As children age and begin to develop their social image, they begin to rely more on their peers for their sense of identity and social support.

The Effects of Obesity on Children Versus Adults

In June 2004, a review of literature was done by the Texas Department of Health to determine the effects of childhood obesity. Both short and long-term effects on financial status, psychological and physiological factors were noted. Children affected by obesity may experience bullying in all forms, such as teasing, name calling and physical harm. They are often the subject of rumors and/or lies and experience social isolation due to rejection by their peers.

These experiences frequently cause damaging effects to their self-esteem as well as emotional distress and anxiety along with other psychological disorders such as depression, suicidal thoughts and extreme dieting (anorexia/bulimia).

Adults who have been obese since childhood and developed low self-esteem are more likely to face discrimination in educational settings and the workplace, thus achieving lower educational status. They are also less likely to marry. A greater decrease in activity, including walking, shopping, attending movies and parties and increased feelings of sadness and hopelessness are found in adults between the ages of 51 to 69.
Health Effects of Obesity
Health problems typically found in adults are becoming increasingly common in children, such as hypertension (high blood pressure), type 2 diabetes and increased risk of heart disease. Also, increased stress on the joints may eventually lead to structural problems by early adulthood.

Obesity increases the risk of developing many chronic and even fatal conditions. Along with the more obvious, including high blood pressure, coronary heart disease, diabetes and stroke, there is also a higher risk of cancer.

Decreased mobility and inability to perform activities of daily life, such as eating, bathing and dressing, are common among older individuals affected by obesity. These adults frequently suffer from persistent and chronic symptoms of illness such as fatigue, breathing problems, depression and increased symptoms of arthritis and joint problems. In fact, the effects of obesity on chronic conditions are comparable to the physiological effects of approximately 20 years of aging.

The effects of obesity on chronic conditions are comparable to the physiological effects of approximately 20 years of aging.

Preventing the Effects of Obesity
Can the effects of obesity be prevented? In one study, (Mellin et al, 2002) good family connections protected children against the adverse effects of obesity. With children, parental support and communication can positively affect self-esteem and lead to increased participation in group activities and improved social relationships. As well, participation in group or team activities is also associated with improved social skills and self-esteem. Obese children are more likely to remain obese throughout their adult life (Wing, Koeske, & Valoski, 1987), and the obese population increases with age (Lohman, 1987).

Conclusion
Metabolism is controlled by the individual and can be adjusted up or down, kind of like a thermostat, by the lifestyle one chooses. When the metabolism is raised through activity and proper nutrition, an increase in energy level will result. Energy is produced in the body in the form of heat; therefore, with increased metabolism a person is less likely to feel cold and begins to sweat sooner after activity has begun. As metabolism increases and the body becomes more efficient, a lower heart rate may be noticed. However, these effects will diminish quickly in just a few days of inactivity and poor nutrition.

A healthy lifestyle must be consistently maintained for life and is more easily maintained when established during childhood.

About the Author:
Julie DeJean Marks, MEd, LCES, is a clinical exercise physiologist, licensed by the state of Louisiana. She received her master’s degree in exercise physiology from the University of Houston in 1991 and has been certified by the American College of Sports Medicine as an exercise test technologist and a clinical exercise specialist. Julie is currently counseling bariatric patients on exercise at Lafayette General Medical Center in Lafayette, LA.

Basal Metabolic Rate (BMR) and its Role in Obesity

The number of obese adults has increased rapidly since 1991 and is much higher among the age population of 51 to 69. A variety of things contribute to obesity as age progresses and even during childhood, however, the main factor is a slower metabolism or basal metabolic rate (BMR).

BMR is the total amount of energy that the body uses on a daily basis to stay alive and function. With age, people move less which slows metabolism. The decrease in movement is due in part to responsibilities, but mainly because of technology which is also a major factor in childhood obesity.

Through technology, less activity is required to perform basic tasks, such as turning on the television or the lights and washing dishes and clothes. Video games and computers have also drawn people away from outside activities.

With age and a decrease in activity, muscle tissue, which is a major source of energy production, begins to get smaller and fewer calories are burned on a daily basis due to the decreased metabolism. If foods with large amounts of calories are consumed as well, then the body will quickly gain weight. Muscle mass can be maintained and/or improved through an increase in physical activity which slows the progression of aging. Consuming smaller portions of nutritionally sound foods contributes to a higher metabolism.
OAC Membership
Building a Coalition of those Affected

The OAC is the ONLY non profit organization whose sole focus is helping those affected by obesity. The OAC is a great place to turn if you are looking for a way to get involved and give back to the cause of obesity.

There are a variety of ways that you can make a difference, but the first-step is to become an OAC Member. The great thing about OAC Membership is that you can be as involved as you would like. Simply being a member contributes to the cause of obesity.

Why YOU Should Become an OAC Member
Quite simply, because the voice of those affected needs to be built! The OAC not only provides valuable public education on obesity, but we also conduct a variety of advocacy efforts. With advocacy, our voice must be strong. And, membership is what gives the OAC its strong voice.

JOIN NOW
Complete the below application now!
For more information, visit the OAC Web site at www.obesityaction.org.

Membership Application

Yes! I would like to join the OAC’s efforts. I would like to join as a/an:

- Individual Member: $20/year
- Professional Member: $50/year
- Physician Member: $150/year
- Institutional Member: $500/year
- Chairman’s Council: $1,000 and up/year

Name: ____________________________
Company: __________________________
Address: __________________________
City: ____________ State: ______ Zip: ____________
Phone: ______________ Email: ______________________

Payment Information
Enclosed is my check (payable to the OAC) for $ ____________.
Please charge my credit card for my membership fee:
- Discover®  MasterCard®  Visa®  Amex®

Credit Card Number: __________________________
Expiration Date: ____________ Billing Zip Code: ____________

Mail to: OAC
4511 North Himes Ave., Ste. 250
Tampa, FL 33614
Or Fax to: (813) 873-7838

The OAC wants YOU to be a part of what we do. No matter how you’re impacted, having individuals join our efforts who believe in making a difference is essential. That’s why the OAC offers various member categories, so you can get involved at your desired level.

Several valuable benefits also accompany your OAC membership. Each membership category offers something different. Here are some of the core benefits to membership:

- Official welcome letter and membership card
- Annual subscription to the OAC’s magazine
- Subscription to the OAC’s members-only monthly electronic newsletter
- Periodic member alerts informing you of issues that need action/attention
- Ability to lend your voice to the cause
- Representation through advocacy
